

Hello. I'm Ben there and I'm Nolin C. fee. Our project, Aut Note, is designed to help the laziest of us. There are two kinds of people, those who take notes in class and those who don't, as Bill Gates says, choose any person to do a difficult job because he'll find the easiest way to do it. Autonom records audio from the user and transcribes it into text using assembly AI.

Then Autonom uses machine learning models to generate a realistic synthetic handwriting. As you can see, we've been reading this conversation. Now we'll stop it.
